

Amendments to the Abstract:

Please amend the Abstract of the Disclosure as follows:

~~The invention relates to a~~ A sealing arrangement ~~(10)~~ for sealing a gap between two components ~~(12, 16)~~ which can move rotationally with respect to one another about a common axis of rotation ~~(18)~~, having a brush seal ~~(22)~~ on which ~~is arranged fixedly in a first component (12 or 16) and which~~ interacts with a sealing surface ~~(32)~~ of the second component ~~(16 or 12)~~. ~~The invention is distinguished by the fact that the~~ The sealing surface ~~(32)~~ is conical in form, with at least one component ~~(12 or 16)~~ being axially displaceable and adjustable with respect to the other component in order to reduce the gap between the brush seal and the second component (16 or 12).
